

Laboratory Activity 1

Guide Questions:

1. Where is the CSS written?
 - The CSS codes are written inside the html tags (<h1> and <p>) in order to change its appearance once the webpage is running.

```
inline.html X
C: > Users > specito > OneDrive > Desktop > Sarah Pecito > WDP > MODULE 7 (APRIL 10, 2026) > inline.html > html
1  <!DOCTYPE html>
2  <html>
3    <head>
4      <title>Inline CSS Activity</title>
5    </head>
6    <body>
7      <h1 style="color: blue;">Welcome to My Page</h1>
8      <p style="font-size: 18px; background-color: lightgray;">This is a paragraph.</p>
9    </body>
10 </html>
```

2. What is one limitation of inline CSS?
 - The only limitation when using inline CSS is that it can only be used once and can't be reused in multiple elements. Using external CSS is the most efficient way to style a webpage when reusing and maintaining codes.
