

Laboratory Activity 2

Guide Questions:

1. Where is the CSS located?
 - The internal CSS is located inside the <head> tag under the <style> section. Compared to inline, it is located only under one tag.

```
internal.html X
C: > Users > specito > OneDrive > Desktop > Sarah Pecito > WDP > MODULE 7 (APRIL 10, 2026) > internal.html > html
1  <!DOCTYPE html>
2  <html>
3      <head>
4          <title>Internal CSS Activity</title>
5          <style>
6              h1 {
7                  color: green;
8              }
9              p {
10                 font-size: 20px;
11             }
12             body {
13                 background-color: lightyellow;
14             }
15         </style>
16     </head>
17     <body>
18         <h1>My Internal CSS Page</h1>
19         <p>This is another paragraph.</p>
20     </body>
21 </html>
```

2. How is this better than inline CSS?
 - It is better because the codes are much easier to navigate, maintain, reuse, and edit unlike inline. Inline CSS is mixed in with the html tags, where it could be a lot messier compared to internal.
